

Safety and Transparency Center

SwordPay | swordpay.com | Effective: 28 May 2026

SwordPay exists to give Creators control of their work and Fans confidence in what they pay for. We are committed to a safe platform that goes beyond the legal minimum while preserving the freedom of Creators and Fans to control and monetise lawful Content. This Center indexes the controls, policies, and disclosures we use to keep our community safe.

Age and identity verification

We require every Creator to verify identity before earning, through a combination of automated checks and human review with our verification partner (currently Dudit). Creator onboarding collects full legal name; verified email and phone number; postal address and country of residence; date of birth; valid government-issued photo ID; a standalone selfie and a selfie holding the ID; bank account and payout details; tax identification where required (including W-9 and SSN for US Creators); and social-media handles or websites used to corroborate identity.

We re-check identity on a rolling 30-day selfie cycle and may impose additional checks in high-risk jurisdictions, on flagged accounts, or in response to suspicious activity. A Creator who fails re-verification loses access until the check is completed. Fans must also be at least 18; in jurisdictions requiring additional age assurance (for example under the UK Online Safety Act) we apply email-address and/or facial age estimation through a third party. Facial age estimation is not facial recognition, and we do not hold Face Recognition Data ourselves.

Content moderation

We moderate Content to enforce our Terms of Service and Acceptable Use Policy. Our programme combines hash-list scanning against known harmful material — including hashes from NCMEC, the Internet Watch Foundation, CyberTip Canada, Microsoft PhotoDNA, Thorn, StopNCII.org, and our internal repository — automated classifiers across images, video, audio, and text, stop-word filters, and human review of any flagged Content within 24 hours.

We do not use end-to-end encryption. Every piece of Content shared on SwordPay — including in direct messages — is visible to our trained moderators. There are no hidden posts, secret areas, or disappearing messages. When Content breaches our Terms we may deactivate it, issue a warning or final warning, suspend or close the account, or ban the operator from re-registering.

Combatting child sexual abuse material (CSAM)

We have zero tolerance for CSAM. All uploaded Content is scanned against known CSAM hash databases before it can appear on a newsfeed; material that passes the automated check is reviewed by trained moderators within 24 hours; and we invest in tooling to detect previously unknown CSAM, with confirmed matches escalated to specialist reviewers. When we identify suspected CSAM we remove it from public view, place the originating account into a 90-day secure-hold, file a CyberTipline report with NCMEC, contribute any new hash to NCMEC and partner lists, and cooperate with law enforcement. We participate in NCMEC's TakeItDown programme, which lets individuals under 18 hash images they fear being shared and have them blocked from upload.

Ensuring consent for intimate images

Sharing non-consensual intimate images (NCII) is against our Terms. Each Creator is responsible for obtaining informed consent from every person featured in explicit Content, and Co-Authored Content requires either a tagged verified Creator or a properly executed release form with age and identity verification of everyone depicted. If we identify NCII, we remove it, suspend the originating account, and may permanently ban the user. We participate in StopNCII.org, an industry hash-and-block tool. To withdraw consent for Content that already features you, email support@swordpay.io at any time.

Tackling hate speech and harassment

Hate speech, discrimination, and targeted harassment are prohibited by our Acceptable Use Policy. Our enforcement covers Content that vilifies, dehumanises, or threatens anyone based on a protected characteristic. Because no user on SwordPay is anonymous and we do not use end-to-end encryption, we can identify, remove, and where appropriate report individuals who engage in hate speech, doxing, defamation, or harassment.

Safeguarding against money laundering and fraud

What is money laundering?

Money laundering is the process of taking money derived from criminal activity and passing it through legitimate-seeming transactions — such as buying goods or services — so that it appears to come from a lawful source. The funds are “dirty,” and the process “launders” them to look “clean.”

What is fraud?

Fraud is the process of obtaining money or another thing of value by deceiving or tricking someone.

Our zero-tolerance approach

Money laundering and fraud are not permitted or tolerated on SwordPay. We operate a zero-tolerance approach and maintain tools, policies, and procedures designed to detect and prevent any attempt to use SwordPay for either purpose. Our compliance team monitors for behaviour that may indicate money laundering or fraud. The red flags we watch for include:

- * Multiple payment-card attempts using different names
- * Rapid, atypical purchase bursts
- * Payment attempts from IP addresses on our high-risk list
- * Matching IP addresses for both Fan and Creator in a transaction
- * New accounts on suspicious email domains
- * Direct messages suggesting off-platform settlement (for example, returning a percentage of the Fan Payment by another method)

We comply with all applicable sanctions regimes, including the US Office of Foreign Assets Control (OFAC), the UK Office of Financial Sanctions Implementation (OFSI), EU sanctions lists, and UN sanctions lists. We screen user identities against these lists at onboarding and on a recurring basis. Where suspicious activity is confirmed we suspend the account, freeze any relevant transactions, and where appropriate report to law enforcement. Because of our verification process, transaction limits, and screening, the incidence of money laundering or fraud on SwordPay is rare.

Training

We make sure the compliance team responsible for protecting our platform is trained continually on industry best practices for detecting and preventing money laundering and fraud. Training is refreshed as typologies, sanctions regimes, and regulatory guidance evolve.

Assisting law enforcement

Our dedicated team responds to lawful requests from law enforcement and regulators in every jurisdiction in which we operate. When we receive a request we verify that it satisfies the laws of the relevant jurisdiction, aim to respond to non-urgent requests within 24 to 48 hours (and within 14 days at the outside), and escalate any indication of imminent physical danger immediately to senior management. Where the law permits and the request is valid we may disclose information including legal name and username, profile URL, email and IP address, telephone number and billing address, transaction information, tokenised card data (first six and last four digits only), and content and direct-message logs. Law-enforcement contact routes are available on request via compliance@swordpay.io.

Helping Creators protect their copyright

Every Creator owns the Content they post. We provide free customisable watermarking from Privacy and Safety settings, issue outbound DMCA takedown notices on behalf of Creators to third-party sites, and handle counter-notifications under our DMCA Takedown Policy. Creators may also use small-claims procedures in their jurisdiction, such as the Copyright Claims Board under the US CASE Act or the UK Intellectual Property and Enterprise Court small-claims track.

Privacy

We collect personal data to operate SwordPay safely, in line with our Privacy Policy. Users may exercise rights of access, correction, deletion, restriction, portability, objection, and withdrawal of consent. Where the law requires — for example, where Content is the subject of a law-enforcement preservation order — we may decline a deletion request.

Appeals and complaints

If you believe we made an incorrect moderation decision, you may appeal under our Appeals Policy within six months; appeals are considered diligently and non-arbitrarily, and EU residents may also refer the matter to an out-of-court dispute-settlement body. To complain about Content, our enforcement of the Terms, or a regulatory matter, see the Complaints Policy. Complaints not relating to copyright or a moderation appeal are handled by our compliance team within 24 to 48 hours.

Modern slavery and human trafficking

Modern slavery and human trafficking are not permitted on SwordPay. Our Anti-Slavery and Anti-Trafficking Statement describes the controls we use, the partner organisations we work with, and our reporting channels.

Tax compliance

SwordPay complies with applicable tax laws in every jurisdiction in which it operates. Creators are responsible for their own tax affairs. Our Tax Policy explains Fan-Payment taxation, UK VAT registration for VAT-registered Creators, US Form 1099 thresholds, and reporting obligations such as DAC7 in the European Union.

Our partners in safety

- * Didit — identity verification
- * Sightengine — content classification
- * Internet Watch Foundation — CSAM hash lists
- * National Center for Missing & Exploited Children (NCMEC) — CyberTipline reporting and hash sharing
- * StopNCII.org — non-consensual intimate image hash-and-block
- * NCMEC TakeItDown — self-generated CSAM hash-and-block

Independent assurance and transparency reports

We commit to commissioning periodic independent assurance reviews of our safety compliance programme, with a summary of the most recent review published here once available. We also commit to publishing periodic Transparency Reports covering account applications received, approved, and rejected; user reports filed and actioned; Content uploaded and deactivated; account deactivations by reason; CSAM detections and NCMEC reports; law-enforcement requests by country; data-subject requests; and DMCA notices issued on behalf of Creators. Initial cadence will be quarterly, with the first report published once we have sufficient month-on-month data.

Where the EU Digital Services Act applies, we publish a separate DSA Transparency Report and report our EEA monthly active recipients there. At present our EEA user count is materially below the 45 million threshold for “very large online platform” designation.
